Audiffex Pedals was released under our former label DSound and over the last 10 years was one of the most popular and most requested pedals. Since our company is also software and music solutions provider, we didn't have any delay pedals. As a result, when we decided to build new pedals, the auto-tuner and auto-wah were our first choice for delay, but we started to think, what can be better than a real sound? The pedal was designed to be flexible and very accurate, so we decided to have most of the controls in the front panel. The final result is that you can do almost all your tasks with just three knobs. If you wish, you can change your mind and quickly set the controls with simple clicks or taps on the front panel. The audio quality is excellent, and it allows you to spend more time playing than setting up the pedal. Each of the 12 pedals includes a well-defined sound, from complex sound for effects such as delay, flanger and phaser to a compressor or reverb. The top quality and professional look makes these pedals ideal for all guitarists! The pedal is fully MIDI controllable and can send its settings to external control devices (through MIDI) with the optional controller. Attention: If you use the Linux operating system, and you need to adjust the MIDI settings, please be aware that the OS allows the control over midi settings only in the directory /etc/pulse/. Since the Audiffex Pedals is based on Linux, you need to change the settings in this directory. The pedals can be installed in most VST hosts, such as FL Studio, Cubase, ProTools, Logic, etc. If you want to use the effects in your sequencer, install the pedals in the FL Studio/Cubase/ProTools/Logic/etc plugins folder. With a real guitar pedal setup in your studio, you can perform with very short set-up times. Many guitarists perform each day with no set-up. Our effect pedals allow for these great performances with short set-up times. Features: Efficient core management, so you have access to all effects even if effects effects are loaded. Chrome application: No footprint, no requirement for system resources. Integrated 16-bit effects processor: 32-bit precision with optimized execution speed. VST/AU/RTAS supported Chrome only: No need for CPU-intensive plug-in. The pedals and their settings can be saved to the internal flash memory. This allows easy set-up on a new computer. You can save a list of pedals with settings and export to the device. Presets for different genres, like blues, rock, and metal. Presets for different guitar players. LFO for your effects Presets with automation mode. Each effects has a workflow mode. The effects can be triggered by MIDI note. Modern user interface and user friendly presets. Completely compatible with all current versions of Cubase (with the Cubase U plugin). Three main use cases are available: Pedals are set-up with the various presets from the collection of guitar players. You can create a group of presets and save them to a list. You can use the built-in presets for blues and metal genres, as well as guitar player presets. The chrome application with its own presets can be used as a standalone application. All presets are available as any combination of: pattern, name, number of repetitions, loop duration, sequence, volume and effect. Audiophile Mastering Tools 2 The Audiophile Mastering Tools 2 package is a complete set of audio mastering tools developed by mixing engineers and producers. Audiffex Pedals is an add-on for VST and AU processing of guitars, bass, vocals, acoustic instruments and other instruments, as well as for software instruments. The primary task of the pedal is not an enhancement of sound, but a modification of the attack. Audiffex Pedals changes its length in different registers, depending on the type of instrument and the number of the string being plucked. This effect is possible due to the powerful processing power of our stomp-boxes, which are on a different level than other software products. Audiffex Pedals is not just a guitar pedaling effect, but it has many capabilities. From the Guitar Overdrive effect, there are 18 versions and 10 combinations of each. From the Guitar Clean Preamp, we have 4 versions and from Guitar Preamp, we have 5 versions. From the Bass Chorus, we have 12 versions. From the Bass Overdrive, we have 13 versions and 12 from the Bass Distortion. Guitar Overdrive Pedals Overdrive is one of the most important effects in guitar signal processing. The original G9 Classic is the first guitar effect with an industry standard overdrive sound. From our original G9 Standard version we have 3 different versions - Clean, Crunch and Gain. All overdrives are loaded in "Overdrive" folder. Clean Guitar Overdrive Pedals Description: Guitar Overdrive Pedals with clean sound. From the original G9 Clean version, there are 3 versions - Clean, Overdrive and Overdrive-Gain. Overdrive is not simply an extension of the signal, but it is a modification of the attack. Like all overdrives, each of them has its own characteristic sound. Some of them are stronger than others. The G9 Clean version is a universal version, so its parameters are automatically selected depending on the sound of the instrument. On the other hand, there is no parameter for the gain. This parameter is an important aspect of guitar processing. Guitarists often add some overdrive to the signal, but they want only the right amount. Overdrive Pedals does not add some "boom" to the sound of the guitar, but it changes its length in different registers, depending on the number of the string being plucked. Overdrive Pedals (Crunch) Description: Guitar Overdrive Pedals with crunch sound. Overdrive is not simply an extension of the signal, but it is a modification of the attack. Like all overdrives, each of them has its own characteristic sound. Some of them are stronger than others. The G9 Clean version is a universal version, so its parameters are automatically selected depending on the sound of the instrument. On the other hand, there is no parameter for the gain. This parameter is an important aspect of guitar processing. Guitarists often add some overdrive to
