Just pop a few pills, and the next thing you know, you might get a face lift. That's right: In 2016, 55-year-old Sylvia Buckner had both her face and a substantial amount of her own skin surgically removed and replaced with donated skin from a 22-year-old. Her new face, skin, and shapely body looked more like those of a woman a few years younger. The operation took more than a year and cost Buckner about $400,000. "The best part was waking up every day

knowing I was a new person," she told The Daily Beast. "My scars healed and I look much younger. My skin looks healthy now. I can't wait for my doctor to get back to me to see how it's doing." In July 2016, Buckner had the surgery performed at the now defunct Skin & Cancer Hospital, which operated in Las Vegas between 2014 and 2016. She had wanted the operation for a long time, she told The Daily Beast. The hospital's website notes that at the time of the surgery, the clinic was "the first and only medical spa in Nevada to perform full-body skin and face transplants." "It was so much more than the surgery," she said. "When I got there, my doctor explained everything that was going to happen and let me go over it again with him. That was comforting. He gave me some great advice." "It

What's New In USBUniquekey SDK?

USBUniquekey SDK is a handy and reliable programming toolkit designed to generate USB hardware keys. USBUniquekey SDK includes everything developers need to create applications for USB key generation. The generated keys are unique and secure. The USBUniquekey SDK includes, as well as implementation of KeyGen and KeyGenUI components, high-level GUI Builder - USBUniquekeyBuilder, and also KeyManager COM object

that will allow developers to conveniently create several applications with one set of code. KeyGen and KeyGenUI are the main components in the USBUniquekey SDK. They allow developers to use any language they wish. KeyGenUI provides all functions that are used by KeyGen. KeyGen is a generic code for creating hardware keys. It does not require any additional information from the application. A KeyGen implementation does not require any particular hardware characteristics and can be used with any device for which it is needed. The USBUniquekey SDK includes complete examples. Each of the examples shows how to create the USB key using KeyGen and how to use KeyGenUI. Most of them include descriptions of each functionality and you will find the source code for them in the code sample folder. Also you can study the UI screenshot images of each sample. Benefits: - Support of 32-bit and 64-bit development platforms. - Supports all current Microsoft operating systems from Windows 95 to Windows 7. - Highly optimized to use less CPU power and memory. - Minimal memory usage. - The SDK can be used to create the USB key on the same PC on which it is being used. - Supports the installation of the key into the PC BIOS, which is very convenient for the system to recognize the USB device automatically, but it may require the programming of the

BIOS manufacturer. - Supports the detection of all USB devices. - Ability to update the key using the USB port. - Implements the USB architecture. - Compatibility with all programming languages and environments. - Provides a GUI Builder with the ease of use. - Full documentation in the help file. - Ability to generate the key with the version of the library. Features: - Support of the library for all USB devices, including the internal and external ones. - Support for all operating systems. - Support for all peripherals, including keyboards, mice, and others. - Generation of the key is done on a unique computer, which allows you to generate the key once and use it for many devices at the same time. - The ability to update the key with USB port. - The ability to generate a key with the version of the library. - Movable application object. - Generates a key easily. - Implementation of a COM object for developer convenience. - Supports all languages and environments. - Exposes a convenient GUI Builder. - Allows you to
