The software itself is split into two main parts. One is the GUI which displays the information regarding the operation of the process and the other is a command line for running and carrying out the actual operations. The first thing you are required to do is to select a folder as the target location. This is where the actual image will be stored during the image processing and the image can be saved in several formats, to preserve its original size and quality. Once you have selected the target location, the software will display the size of the current image along with its dimensions. For each of the image parts, you can give a specific name as well. You can choose to split it by file type (like.png.jpg and etc.) or format. The software will also let you choose the number of compressed copies of the current image that you want. They can be compressed in a variety of ways like jpeg, gif, png etc. Once you are done, press the OK button and the software will begin to process the image. ZW GI to ISO Settings: After the processing is completed, you can burn it to a CD, DVD or Blu-ray disc using a tool of your choice. The software offers the capability to customize the compressed copies. You can specify the number of copies, the location where you want to save the file and even how you want to name it. The maximum size allowed is 4GB. Additionally, you can also compress the files to different JPEG quality levels to get a better output. ZW GI to ISO Verdict: I've personally tested this software and I found it very useful. It allows you to create a single image file from the original files stored in different formats on your hard disk. Overall, the software is extremely easy to use and it provides you with a great number of options to customize the compressing process. a median velocity of -38.5 (± 42) cm/sec (-5.4 (± 6.4) dV/dt).
