Calculor is a lightweight application that features a very simple and streamlined user interface. The program is designed to let you perform simple mathematical calculations and is ideal for adding up your bill at a restaurant or for simple arithmetic, but it also comes with other capabilities that make it an all-rounder that can be used for a variety of tasks. In addition to the ability to do basic arithmetic operations, Calculor enables you to easily insert trigonometrical functions. For example, it can calculate the trigonometrical sums for sine, cosine, and tangent. Although the available functions are limited, the application is easy to use, making it an excellent choice for basic calculations. Aside from calculations, Calculor can also be used to enter expressions, with a focus on allowing you to write in mathematical equations. The form of the equations varies, however, as Calculor recognizes the following functions and constants: sin, cos, tan, arctan, pi, e, 2, pi, pi, ln, log, and sqrt. The application has a simple, clean interface with only one button: the add button. Once you click this, a text field appears on your screen where you can enter a number or a mathematical expression. To insert a new number, you simply type it in the text field and then press enter to get the result. When you enter the values for the functions, the Calculator will instantly display the result.
